

Transfer StableCoin from 3rd party wallet to ThunderCore Hub

In order to give users a better experience of ThunderCore's ecosystem, when you use USDT/DAI to deposit into ThunderCore Hub, it will be automatically converted to TT-StableCoin. Please don't worry, **this process is reversible**, and when you use TT-StableCoin to withdraw to your other wallet, it will be converted back to USDT/DAI.

*TT-StableCoin: TT-USDT, TT-DAI

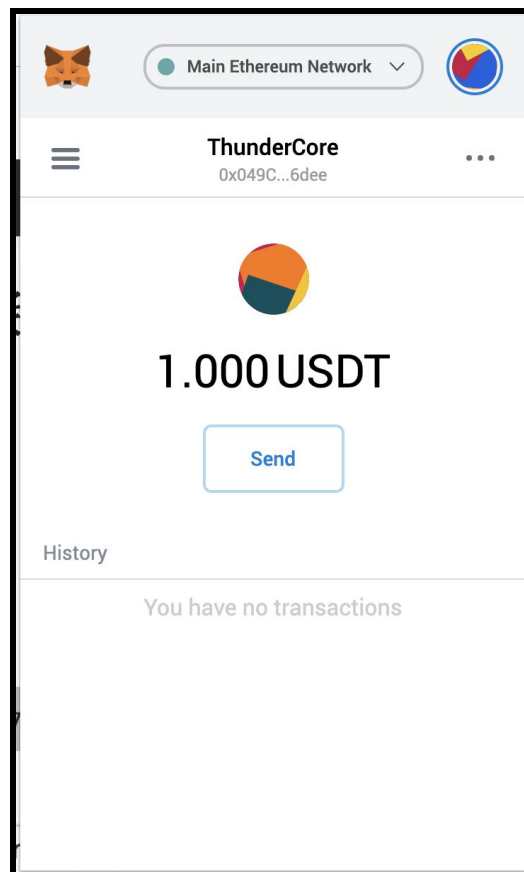

*Check out [here](#) if you want to know how to transfer your StableCoin from ThunderCore Hub to other wallet

If you are a holder of USDT

*DAI is converted in a similar way to this tutorial

Note: We use MetaMask as an example of this tutorial. Other 3rd party wallets operate in a similar way to MetaMask

1. Open MetaMask and press **Send**

2. Enter the **ThunderCore Hub** address and **Amount** you want to send to, then press **Next**

3. Check all details then press **Confirm** to proceed

The screenshot displays a mobile wallet interface for a transfer confirmation. At the top, there is a navigation bar with a back arrow and the text '< Edit'. To the right of the navigation bar, it says 'Main Ethereum Network'. Below the navigation bar, the sender's name 'ThunderCore' and a right-pointing arrow are visible, followed by the recipient's address '0xB913...5460'. A 'TRANSFER' button is located below the sender information. The main content area shows the amount '1 USDT' with a diamond icon and '0' below it. There are two tabs, 'DETAILS' and 'DATA', with 'DETAILS' being the active tab. Below the tabs, the 'GAS FEE' is listed as '0.001602' (with a diamond icon) and '\$0.26'. An 'EDIT' link is positioned to the right of the gas fee. Below a horizontal line, the 'TOTAL' is shown as '1 USDT + 0.001602' (with a diamond icon) and '\$0.26', with 'AMOUNT + GAS FEE' written above the total amount. At the bottom of the screen, there are two buttons: 'Reject' and 'Confirm'. The 'Confirm' button is highlighted with a red border.
